## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Humplemen et al., (US 6,288,716) in view of Mano et al., (US 5,793,366).
- 2. As per claims 1, 4, and 6, *Humplemen* teaches a client in a network where various digital devices connected to the network operate as the client or as servers, said various digital devices having a protocol layer as an Internet protocol stack on the upper network communication layer (physical layer), the method comprising the steps of establishing a communication channel by the client device with respect to server devices. (Abstract, col. 4, lines 11-col. 24, lines 1-46) However, *Humplemen* is silent in respect to the receiving or transmitting a signal that indicates changes in the operation states of the server devices from the server devices by the client device and displaying the change in the operation state of a specific device on a screen thereof.
- 3. *Mano* teaches a method for displaying changes in operation states of network devices on a display screen of a client device which operates as a client in a network

where various digital devices connected to the network operate as the client or as servers, said various digital devices having a protocol layer (via IEEE 1394), the method comprising the steps of:

- establishing a communication channel by the client device with respect to server devices; (obvious in 1394 plug and play)
- receiving/transmitting a signal that indicates changes in the operation states of
  the server devices from the server devices by the client device and displaying the
  change in the operation state of a specific device on a screen thereof. (Abstract,
  col. 2, lines 61-col.8, lines 1-23)
- 4. *Mano* teaches a computer network with GUI that displays animated images representing devices coupled to a bus structure. The GUI will recognize signals from the various digital devices referring to a change in the operation state of at least more digital device and displaying the change in the operation state on a screen. It would have been obvious to one of ordinary skill to implement *Mano's* method of displaying the changes of the operation state of the server devices on a screen with *Humplemen's* network. Doing so would give the user the ability to monitor the activity of the connected devices in real-time.
- 5. As per claim 2, *Humplemen* obviously teaches wherein the client device establishes said communication channel with respect to the server device via polling.

Application/Control Number: 09/445,769 Page 4

Art Unit: 2182

6. As per claim 3, *Humplemen* obviously teaches of a Java applet. Further, *Humplemen* teaches of the client device establishing the communication channel with respect to the server device.

7. As per claim 5, *Humplemen-Mano* teaches a method of displaying changes in operation states of network devices on a display screen of a client device which operates as a client in a network where various digital devices connected to the network operate as the client or the servers, having the same protocol layer as an Internet protocol stack on the upper network communication layer, thereby it would have been obvious that *Humplemen-Mano* also teaches the code to implement the method.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tammara Peyton whose telephone number is (703) 306-5508. The examiner can normally be reached between 8:00 - 4:30 from Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Gaffin, can be reached on (703) 308-3301. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3718. Any inquiry of a general nature of relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Mailed responses to this action should be sent to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231.

Faxes for Official/formal communications intended for entry should be sent to:

(703) 746-7238, After Final (703)746-7239

or, for informal or draft communications, to:

(703) 746-7240 (please label "PROPOSED" or "DRAFT").

Hand-delivered responses should be brought to:

Crystal Park II, 2121 Crystal Drive, Arlington, VA, Fourth Floor

(Receptionist).
